

# African and Asian Elephants

African and Asian elephants are alike in some ways but different in others. Let's find out how!

Around the circles below are facts about elephants. If the fact is about African elephants, write it in the left circle. If it's about Asian elephants, write it in the right circle. If the fact is about both African and Asian elephants, write it in the middle space.

Only **males** have tusks

**Males** and **females** have tusks

• Both males and females have tusks

Both

Answers: African elephants- Have bigger ears, males and females have tusks, lives on the savannah, trunk has 2 "fingers." Asian elephants- Have smaller ears, only males have tusks, trunk has 1 "finger." Both- Their poop is fertilizer- it helps plants to grow, can use trunk to pick things up, eats plants, lives in the forest.
